## CS 598 Homework 1

## Mohan Sun\*

We implement a fully connected one-hidden-layer neural network and train the model with MNIST data. Figure 1 shows training results and timing. Our model have an accuracy of 97.97% which satisfies the requirement of the assignment.

Model the model is a modified and extended version of Logistic regression.py. We keep the i/o and data processing part, keep the structure of Epoch loop, mini-batch loop, and forward as well as backward as function. We modified forward to:

```
\label{eq:continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous_continuous
```

<sup>\*</sup>Even if this document use "we" and "our", the homework is done by only Mohan "Fred" Sun without any collaboration. Netid: mohans2

and backward to:

```
def backward(x, y, Z, H, p, model, model_grads):
    dU = np.copy(p)
    dU[y] = dU[y] - 1
    dC = dU @ H.T
    delta = model['C'].T @ dU
    db1 = delta * sigmoidp(Z)
    dW = db1 @ x.T
    model_grads['W']=dW
    model_grads['b1']=db1
    model_grads['b2']=dU
    model_grads['C']=dC
    return model_grads
```

This basically reflects the model used in lecture notes. The only difference here is that we use sigmoid instead of ReLU to avoid overflow issue with exponentials in softmax.

parameters For this model, we set  $D_h = 100$  and  $LR^{(0)} = 0.1$ . LR is scaled down by 10 for every 5 epochs.
